

SADNAN JONAYET SAJID

Robotics & Embedded Systems Engineer — I turn sensor data into autonomous decisions.

4 AI/Robotics Systems Built · 2 Conference Papers Submitted (ICECE & ICCIT 2026) · 3-Person Team Led · 2+ Yrs Project Delivery Experience

Dhaka, Bangladesh | +880 1604-816949 / +880 1748-548499 | sadnansajid355@gmail.com | linkedin.com/in/sadnan-sajid | github.com/sajid510 | sajid510.github.io

PROFILE

Robotics and embedded-AI engineer with hands-on experience shipping autonomous navigation systems (ROS2, SLAM, Nav2) and AI-powered automation tools running in production. Progressed through four roles in two years managing industrial power infrastructure projects before returning to engineering studies — a rare combination of delivery discipline and deep technical build skills. Currently leading a 3-person robotics team building a Jetson Nano-powered autonomous mobile robot from the ground up. Comfortable across the stack: hardware integration, embedded C/C++, Python/AI pipelines, and zero-cost cloud infrastructure.

KEY PROJECTS

Ultron UV — Team Lead, 3-person team ; [git@github.com:supersonic654e-byte/Ultron-UV.git](https://github.com/supersonic654e-byte/Ultron-UV.git) *In Progress*

- Ultron UV is a research prototype for an autonomous hospital disinfection robot.
- Architected and am developing a full-stack autonomous mobile robot, leading hardware integration (LiDAR, Kinect RGB-D, Jetson Nano, Arduino Mega) and software (ROS2, SLAM Toolbox, Nav2).
- Built a distributed Zenoh + Tailscale VPN control architecture enabling secure remote monitoring and teleoperation from anywhere.

Tech ROS2 Nav2 SLAM Toolbox Jetson Nano LiDAR Kinect RGB-D Arduino Mega Zenoh Tailscale Python C++

News_Pulse — [git@github.com:sajid510/news-pulse.git](https://github.com/sajid510/news-pulse.git) *Shipped*

- NewsPulse is an end-to-end automation pipeline that turns raw RSS feeds into a polished, AI-curated intelligence email for any industry.
- It was built for the robotics space first (a weekly digest for a student robotics team), then generalized so anyone can point it at their own field.

Tech Python Gemini 2.5 Flash GitHub Actions Gmail SMTP RSS

Team_Pulse — [git@github.com:sajid510/team-pulse.git](https://github.com/sajid510/team-pulse.git) *Live*

- An AI-first, generalized team project dashboard — built for any technical team: robotics, software, hardware, research, AI/ML.

Tech JavaScript Firebase Groq API GitHub Pages

Ai integrated Career OS — [git@github.com:sajid510/career-os.git](https://github.com/sajid510/career-os.git) *Active*

- Career OS is a personal, self-learning career command center that unifies every automation system built (Robotics & Embedded AI Researcher, UAP EEE) into a single dashboard, AI assistant, and Android app.
- It plans, tracks, notify and nudges an individual mission in Robotics / Autonomous Systems & so on with deadlines.

PROFESSIONAL EXPERIENCE

Golden Power Engineering — Project Manager

Jan 2023 – Feb 2025

Mirpur-1, Dhaka, Bangladesh

- Progressed through four roles in two years —
Assistant → Sales Executive → Junior Marketing Officer → Project Manager
- Managed end-to-end delivery of industrial power infrastructure projects (3-phase generators, substations, high-voltage distribution) for commercial and industrial clients.
- Coordinated cross-functional technical, procurement, and client-facing teams to hit on-time delivery targets.
- Launched a new IT product sales channel from scratch, opening a new revenue stream for the company.

Family Agribusiness (Poultry & Feed) — Operations Lead

Jun 2020 – Dec 2022

Bangladesh

- Took full operational ownership of a family business through the COVID-19 disruption, managing supply chain, procurement, and B2B/B2C distribution.
- Restructured vendor relationships to stabilize operations during a period of acute market disruption.

EDUCATION

University of Asia Pacific — B.Sc. Electrical & Electronic Engineering

Jan 2024 – Dec 2027

(Expected)

LEADERSHIP & AFFILIATIONS

- Team Leader**, Autonomous Robotics Research Group, University of Asia Pacific (2024–Present).
- Membership Development Coordinator**, IEEE Student Branch, University of Asia Pacific.
- IEEE Student Member.

HONORS & AWARDS

- Champion — IEEE WiE BD Summit 2024 (Robotics for Climate Change)
- 5th Place — IEEE Region 10 Robotics Competition
- 11th Place — 6th Kibo Robot Programming Challenge (JAXA-affiliated)
- 2 conference papers submitted: ICECE 2026 (BUET, IEEE co-sponsored) and ICCIT 2026 — under review.
- Featured Innovation — BEAR Innovation Expo 2026 (Dhaka, 25–26 July 2026). Ultron UV presented to the Honorable Prime Minister of Bangladesh; coverage on national television.
